AB - J07144972 A new material for the thermal spray processing comprises zirconia and praseodymium oxide or sinter of their mixt.

- Another new material is also claimed which comprises zirconia, praseodymium oxide, alumina and/or zircon or sinter of their mixt.
- USE/ADVANTAGE - For the prodn. of a brown colour coating using the thermal spraying technique. A yellow colour coating with higher abrasion, corrosion and heat resistance can be obtd. It is applied to metal or concrete surface like steel caps of manholes.
- In an example, 80 ZrO₂ and 20 Pr₆O₁₁ (all in wt.%) were mixed and pulverised in a ball mill into powder having an average dia. of 30 micron. The powder was thermally sprayed to a stainless steel

(Zr, Pr)O₂, Al₂O₃
etc. material pulver
Al₂O₃ - 20% for 100% ZrO₂

and
stainless steel

substrate with a (Ni-Al) plating. (Dwg. 0/0)

IW - THERMAL SPRAY MATERIAL PRODUCE BROWN YELLOW COATING COMPRISE ZIRCONIA

PRASEODYMIUM OXIDE SINTER MIXTURE

IKW - THERMAL SPRAY MATERIAL PRODUCE BROWN YELLOW COATING COMPRISE ZIRCONIA

PRASEODYMIUM OXIDE SINTER MIXTURE
